

AISIN Consolidated Environmental Policy

In order to realize the AISIN philosophy of “Inspiring ‘movement,’ creating tomorrow,” we will endeavor to resolve environmental and social challenges by pursuing the harmonious coexistence of people and the environment far into the future through business activities centering on *monozukuri* (expertise in manufacturing value-added products) and based on the three principles: “Be proactive, make change,” “Raise individuals, expand dreams,” and “Advance, build the future.”

1. In addition to complying with international standards, laws and regulations and agreements stipulated by respective countries, we establish voluntary standards in an effort to prevent pollution.
2. We strive to reduce the environmental footprint throughout the supply chain by promoting the development of new earth-friendly products and technologies that take life cycle into account.
3. Toward the realization of a zero-carbon society, we make efforts to reduce greenhouse gases in all business activities, including promoting the use of clean energy.
4. We minimize resource use and waste through more efficient use of water, procurement of materials with minimal environmental impact, logistics streamlining, and recycling of waste.
5. We promote global nature and environmental conservation activities.
6. We establish annual policies based on a long-term vision and carry out continuous improvements toward achieving the targeted objectives. We also enhance the operation of our environmental management systems through monitoring, and conduct periodical reviews of those system on a global basis.
7. We promote efficient environmental management through the close sharing of information with stakeholders as well as cooperation with our consolidated companies.
8. We promote technological innovation, facility improvement, and educational and training activities to raise employees’ environmental awareness by investing adequate management resources.

We will make this policy known to all the employees in our business sites around the world, strive for lofty goals, and actively disclose information on our efforts and results.
